1 PURPOSE

Important Note: The distributed Readme document should be reviewed prior to the installation or upgrade of GroundWork Monitor Open Source 5.0.

The purpose of this "Readme" document is to outline the bug fixes and known issues in the current release of the GroundWork Monitor Open Source 5.0 product. Additionally, the documents "Installation" and "Release Notes" outline system hardware requirements, pre-installation planning, and steps for a new installation or an upgrade; and new features in this release, respectively. All documents are distributed in .txt and .pdf formats.

2 BUG FIXES

This section includes a description of the bugs fixed in each maintenance release of GroundWork Monitor Open Source 5.0.

Release 5.0.1

The following lists GWOS 4.5 issues fixed in this release of GroundWork Monitor Open Source.

1. GWMPRO-391

GroundWork Commit timing-out.

2. GWMPRO-390

Successfully assign an escalation tree to a service, and then try to remove this tree by leaving the field for an escalation tree blank. The escalation tree entry remains.

3. GWMPRO-386

The system won't allow you to rename a service from uppercase to lowercase. It interprets these as the same name.

4. GWMPRO-383

When attempting to create a new host profile, I get an error stating that a template is required, despite selecting a template.

5. GWMPRO-382

Extended Host info not applied to host profile.

6. GWMPRO-381

Rename a service and the box says "Reame".

7. GWMPRO-377

Dashes not accepted in contact properties pager field.

8. GWMPRO-374

Re-load from nagios.cfg loses perfddata processing.

9. GWMPRO-371

When importing files using Control>Load, service group definitions are created but the groups are not populated with services.

10. GWMPRO-359

Copyright notices for the Bookshelf documentation in GW Monitor should not be claiming copyright to the other open source projects MySQL, RRD, etc.

11. GWMPRO-358

Name space problem when assigning hostgroup and contactgroup the same name.

12. GWMPRO-350

hostgroup membership not correct.

13. GWMPRO-339

Problem with Discover Host Wizard.

14. GWMPRO-337

Configuration>Control>Setup>Max Tree Nodes is misleading and ignored.

15. GWMPRO-333

Nagios load failed.

16. GWMPRO-328

Delete service template not cleaning up contactgroup_assign table.

17. GWMPRO-327

Some navigation drill downs revert to being unexpanded on refresh.

18. GWMPRO-314

If you attach more than two escalation trees, only the first two show up in Configuration.

19. GWMPRO-300

I exported a standard service profile, which included a service template. I made a change so that the service profile with this value was not imported back to Monarch.

20. GWMPRO-278

Configuration>Commands>Modify>Command Name, When you click the "Test" button it does something backwards.

21. GWMPRO-273

After removing a service check in Configuration with a commit, a user is still able to access the service in Performance tab.

22. GWMPRO-271

Import fails after Add button pressed on a partial selection.

23. GWMPRO-270

Wrong directory path listed for nmap_scan_one.pl. Script with EZ-Configuration Host Discovery.

24. GWMPRO-264

The Control>Nagios Main Config>View Edit mouse-over definition for use_retained_scheduling information is incorrect.

25. GWMPRO-262

Spelling typo under Configuration>Service Check sub tab.

26. GWMPRO-250

Configuration>Discover> add a host, re-run Discover wizard, add same host, get MySQL error.

27. GWMPRO-224

The notion of template values being inherited is not very clear in the Bookshelf documentation.

28. GWMPRO-213

Add a scroll bar so that when assigning more than 9-10 packages to a role, all the tabs can be viewed on the screen.

29. GWMPRO-201

Please make the gwservices init script support "status" as well as start and stop.

Release 5.0.2

1. GWMON-840

Trying to add a message filter, does not work.

2. GWMON-832

After removing from MySQL 4.1.XX, the /etc/my.conf file should be removed. This file will conflict with the MySQL 5.0.XX install.

3. GWMON-831

After a successful commit from within the UI, the apache2 error logs show a [Wed Nov 08 11:44:44 2006] [error] [client 172.28.113.67] DBI::db=HASH(0x88fe918)->disconnect invalidates 1 active statement handle.

4. GWMON-820

Documentation error in upgrade section of the 5.0 Installation.txt.

5. GWMON-813

Guava exception within bookshelf.

6. GWMON-801 IE6

Monarch Escalation navigation pane don't show escalations and trees that were created.

7. GWMON-785

Class 'LDAPAuthModule' not found in /usr/local/groundwork/guava/includes/guava.inc.php on line 2042.

8. GWMON-769

Contact groups for host overrides not written to files.

9. GWMON-766

Profile tools, import option died at /usr/local/groundwork/apache2/cgi-bin/monarch/importcfg.pl line 760, <IMPORTFILE> line 79.

10. GWMON-758

Save as Profile on the host wizard does not save host wizard.

11. GWMON-569

Guava re-draws menu items.

12. GWMON-697

resource.cfg cannot be deployed from the build folder.

13. GWMON-707

New host wizard>service profile doesn't apply service dependencies.

14. GWMON-590

Host Delete Tool does not work for 192* hosts.

15. GWMON-568

In EZ and Config no response given when host searched.

16. GWMON-712

Cannot remove service escalation from host>service.

17. GWMON-724

Successfully assign an escalation tree to a service, and then try to remove this tree by leaving the field for escalation tree blank. The escalation tree entry remains.

18. GWMON-706

Spaces in Service Template names.

19. GWMON-710

Delete host templates doesn't clean up contactgroup_assign table.

3 KNOWN ISSUES

This section includes a description of the know issues in this release of GroundWork Monitor Open Source.

Release 5.0.1

1. IE 6 Compatibility Issues

Issues with IE6 error handling may cause the GWMON application to freeze. If this should occur kill and restart your browser and log back into the GWMON application.

2. Application Timeout

Leaving a session open for a long time, may cause a session time out. If this should occur logout and re-login to the GWMON application.

3. Configuration EZ and Configuration

If auto-completion of the Host Search query fails to return a result, the search gives no response when a host search fails.

4. Core Application Packages

Core Application Packages should never be uninstalled. If a core package is removed, the GWMON application has to be reinstalled. There is no "confirm" message presented when removing packages.

Release 5.0.2

1. Monarch - Host Wizard: The template override values from a host profile are not applied.

Host Wizard: The template override values from a host profile are not applied

The workaround is to apply the detail to the host(s) from the host profile after the host has been added.
